EDUCATION

Zhejiang University

Sep 2023 – Jun 2027

Industrial Design · Hangzhou, China · Expected graduation: June 2027

College of Computer Science & Technology

Overall GPA: 3.85/4.3 (85.97/100)

Ranking: 16/42

Third-year GPA: 4.09/4.3 (89.59/100)

INTERNSHIP INTERESTS

User experience, interactive products, and AI applications across design and development.

RESEARCH EXPERIENCE

Speed, Not Density: Oculomotor Responses to Crowd Motion in Passive VR Viewing

Undergraduate research · First author · Manuscript under review at ACM CHI 2027

- Designed a passive-viewing VR study to examine how crowd motion relates to eye movements and discomfort; built 21 Unity stimulus configurations across three crowd behaviors.
- Conducted sessions with 42 participants, collecting eye tracking, peripheral physiological signals, and symptom ratings; retained 35 participants and 245 trials after quality screening.
- Developed the workflow for multimodal data alignment, cleaning, and eye-movement feature extraction; performed paired nonparametric comparisons and multiple-comparison correction, and wrote the manuscript.
- Found higher saccade rates at faster crowd speeds in the primary paired comparison ($n = 11$): 11.55 versus 20.42/min at 3.0 versus 4.5 m/s (BH-adjusted $p = .0366$).

SELECTED PROJECTS

SAVOUR

May – Jun 2026

AR food-information interface · Team project

- Built the recognition-to-overlay software pipeline for an AR food-information prototype, connecting detected food regions to nutrition feedback and taking responsibility for software integration and debugging.
- Integrated GLEE region detection with Qwen visual recognition; revised category correction, repeated detection, short-term tracking, and label expiration to address ambiguous targets and drifting or stale overlays.

Momentum

Apr 2026

AI study support and self-management · Team project

- Built the React/Vite mobile web frontend and connected FastAPI services for task planning, priorities, deadlines, and focused study sessions; a teammate provided the original visual design.
- Integrated LLM tool calls with stored task data and connected speech recognition and synthesis for contextual dialogue during focus sessions; used mode-specific prompts to distinguish study support from task-editing requests.

EMS Feedback for Multi Drone Search Simulation

Jan 2026

Simulation and physical feedback · Team project

- Implemented communication that turns target events in a Unity drone-search simulation into forearm electrical muscle stimulation (EMS), encoding target direction and distance as physical feedback.
- Connected Unity events to a Python device service through TCP/JSON and sent commands over Bluetooth Low Energy; contributed to feedback mapping and demonstrated the integrated pipeline in the course project.

ADDITIONAL DESIGN EXPERIENCE

FOCUS DRIVE

Dec 2025

Driver-service interface · Team project

Designed feature flows and six groups of high-fidelity screens for a driver-service app, covering order handling, navigation, and safety-related information.

X-Band

Jul 2025

Wearable interaction concept · Individual project

Designed a wearable concept for people with limb loss to log phantom-limb discomfort and access professionally configured stimulation; developed one-handed controls, user confirmation, and an explicit stop mechanism.

HONORS

Academic Excellence Exemplar

2026

SKILLS

Frontend and AI	React/Vite frontend development; FastAPI service integration; LLM tool calls and computer vision application integration.
Interactive systems	Unity prototyping; software-hardware integration; TCP/JSON and Bluetooth Low Energy device communication.
Interaction design	Interaction flows and Figma prototyping; user studies and quantitative analysis with Python; Blender 3D modeling and visualization.

LANGUAGES

Mandarin Chinese: Native. **English:** CET-6, 609/710.

TOEFL iBT: 5.0/6 (100/120; CEFR C1), 30 September 2026.

Reading 5.0, Listening 5.0, Writing 5.5, Speaking 4.5 (each out of 6).
